

Influence of EM on the Health of Sheep

A. D. Anjum and T. Hussain

University of Agriculture, Faisalabad, Pakistan

Abstract: *Research has shown the beneficial effect of Effective Micro-organisms in promoting growth of livestock. Thus a study was carried out to determine the effect of this microbial solution on growth of sheep fed on either roughage and fodder or concentrates. Sheep fed with roughage and EM had a lower weight gain and also showed signs of diarrhea. In contrast, the sheep fed with concentrates with EM showed better growth rates than animals fed the concentrates alone. The potential of supplying EM feed with concentrates is presented.*
