

Evaluation of Treating Waste Water with Effective Microorganisms for Use in a Solar Aquatic Facility in Montana, USA

M. T. Wood and P. Farelly

Sustainable Community Development, Colombia, Missouri, USA

***Abstract:** The technology of Effective Microorganisms has been used for management of wastewater effectively. Thus a project is being launched in Montana to use this technology in treating wastewater of a solar aquatic facility. The project envisages the control of malodor and reduction of solid sludge with EM. The technology is being proposed due to its low cost and high efficiency. The presentation highlights this program, which is a first of its kind in the USA.*
